

## Closed circuit cooling towers

## Options and accessories

## Sound attenuation

PFI cooling towers use **quiet and low kW axial fans**, but to reduce noise even further, you can extend your PFI cooling tower with <u>sound attenuation</u>:

• insulated discharge attenuator

or choose the Whisper quiet fan alternative.

Your <u>local BAC representative</u> can explain any of the above sound attenuator options in more detail and provide you with <u>sound pressure and sound power data.</u>
