Flanges

Flanges facilitate **piping connections** on-site.

Sound attenuation

Reducing noise at air **intake and discharge points** brings us closer to silent cooling equipment.

Remote sump connection

The best way to **prevent a sump freezing** is to use the auxiliary remote variety within a heated area. Shutting off the circulating pump allows all the water in the water distribution, as well as that in suspension and the sump to drain freely to the auxiliary sump.

Whisper Quiet fan

Reduce noise even further with **ultra low-noise factory-tested fans.**

Removable fill

Telescopic fill support facilitates **fill replacement** on-site.

Basin heater package

Thanks to our factory-installed heaters, the water stays at 4°C and **never freezes**, even during equipments downtime and however cold it gets outside.

Distribution basin covers

Distribution basin covers on unit tops **prevent debris collecting in unit** water distribution basins.
