Filtration equipment

Water treatment and filtration equipment

Key benefits

- Long service life of your cooling system
- Optimal efficiency of your heat transfer media (fill or coil)
- Less maintenance and downtime
- Help optimize water treatment equipment

For optimal cooling performance and maximum system hygiene install also

- an automatic <u>bleed control</u> (BCP 0 D)
- water treatment equipment for liquid (<u>BCP 2 D</u> <u>BCP 3 D</u>)
- a factory installed <u>sump sweeper piping</u>

Filters remove suspended solids in water. Filters work best alongside <u>sump sweeper piping</u> which increase water circulation and agitation in the basin preventing the solids to settle in the sump or basin.

BAC offers a complete range of filtration systems :

• PF 64 Series separator

Want to install a filter on your cooling equipment? Contact your <u>BAC representative</u> for more information.
