## Open cooling towers

## Options and accessories

## Filter

Filters remove suspended solids in water and:

- extend the service life of your cooling system
- ensure your heat transfer media (fill or coil) remains at optimum efficiency
- help optimize water treatment equipment
- reduce expenses incurred in chemical treatment, maintenance cleaning and downtime

Filters work best alongside sump sweeper piping.

**Want to install a filter on your cooling equipment?** Contact your <u>BAC representative</u> for more information.
